The History of Malvern by Cora Weaver

Highlights, with illustrations, of some of the main events since the creation of the Malvern Hills, that have led to Malvern as it looks today.

What is the second thing you need to do in family history research ?

Well the first is talk to you family and write down what you know. The second thing these days appears to be AncestryDNA(largest database) your immediate relatives. If possible parent/s, sibling/s, biological aunt/s and/or uncle/s then 1st cousins. Why?

As an example, this week a girl asked why does my brother have 1st cousin matches that I don't. We asked how much DNA do you share with your brother.

Reply about 1800 cMs.

Now the max you can share is about 3500 cMs

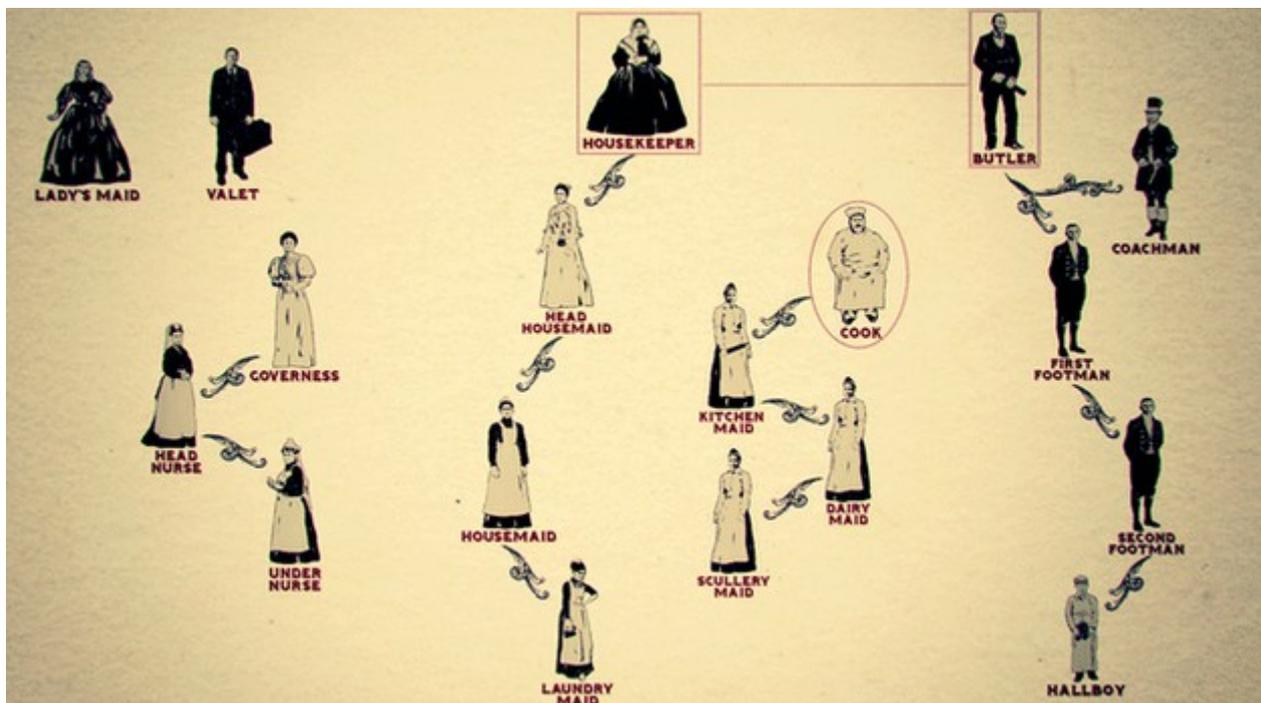

Siblings share about 2700 cMs.

Half siblings about 1750 cMs.

She was quite shocked to find her brother was a half brother. So if she had traced her family tree back 300 years half of that tree might not be hers but be her brother's or vice versa.

~~~~~

*Where did your relative fit in ?*

*I have a butler & a cook  
Also outdoor staff a Gamekeeper*

*Next meeting 11 July a visit to Selly Manor & Minworth Greaves*
